8. APPENDICES	16

1. INTRODUCTION

1.1. Philosophy of INES-RUHENGARI

Three core complementary pillars constitute the philosophical backbone of INES endeavour: to build signs of hope, to contribute to unity and reconciliation, to contribute to sustainable development. These pillars are anchored with Christian ethical values and constructive critical thinking.

1.2. Moto of INES-RUHENGARI

Scientia et lux / Shifting from paper to people

1.3. Vision statement of INES-RUHENGARI

The vision of INES is reflected in the following statement: *Universality in every individual; Knowing in order to better serve the world*

INES as a private Institute for Higher Education orients its academic services towards applied sciences. In the vision of INES this means that all taught sciences are applied to the population daily problems, seeking to propose and answer to them.

1.4. Mission statement of INES-RUHENGARI

According to the statutes of INES the mission is expressed as follows: *“To contribute through interactive junction between civil society, private sector and public sector to the national and regional development, by providing specialized university education enhanced by research, in order to create competitive enterprises and well paid employment”*.

INES' mission focuses on the relevancy and quality of education and the employability of graduates through collaboration with stakeholders in the whole spectrum of academic services. The mission statement refers to the above mentioned ambitions of INES and guides the Quality Management System (QMS)

1.5. INES' core qualities

The following core qualities lie at the basis of the current performance of INES:

• Quality • Scientific excellence • Professional consciousness • Flexibility • Innovation • Entrepreneurship • Team spirit • Determination and perseverance • Courage and responsibility	• Collaboration (among staff and with students) • Architectural concept • Accessibility (geographical and financial) • Receptivity to local need • Relation with the Catholic Church • Culture of Transparency • Integration of Social Sciences and Communication
--	---

1.6. Strategic objectives

- Provide excellent, competitive and practical knowledge
- Educate for creation of employment
- Promote scientific and technological research as well as research for integrated development
- Participate in the opening of the employment market and productive sectors
- Contribute to the complementarities of science and culture
- Contribute to Rwanda's social and economic development through the transfer of appropriate, relevant skills and knowledge according to (inter)national standards.

1.7. Quality principles derived from the vision, mission, strategic objectives and INES qualities

To enhance INES capacity to grow and to achieve Degree Awarding Powers some quality principles/ strategic objectives are defined (strategic plan 2009 – 2013):

- INES has qualified, competent and sufficient academic and administrative staff that are permanently employed;
- INES has sufficient, good quality and well equipped infrastructures;
- The quality of the administrative, financial and academic management of INES corresponds to standards and norms of HEI in the region;

1.8. Concept of applied sciences

The orientation of Applied Sciences was chosen by INES after deep analysis of the situation of labor market and discovering that there was a serious problem of mismatch between University products (graduates) and labour market needs in the region. The underlying question was then on whether Higher Learning Institutions (HLIS) are teaching wrong things or if they are teaching right things in a wrong way. And the answer was found to be that HLIs teach right things but in a wrong way. It is in trying to find the right way to procure its educational services and especially after consultation with experts from countries already implementing the approach, such as the Kingdom of the Netherlands, Germany and Switzerland, that the new orientation of Applied Sciences was adopted. This approach was indeed, identified as the right tool to overcome the mismatch between the academia services and the labour market expectations. Before adopting the approach INES organized several workshops, seminars and consultations. This exercise involved academic and administrative staff, students, professionals, and representatives of professional institutions.

Being an Institute of Applied Sciences implies that INES' academic system and community engagement activities are characterized by (1) academic programs that are not only tailored to students professional requirements but are also developed based on real community development needs, (2) a more competence-based educational methodology with a focus on integrating theories and practical done at school with professional context generic competences, (3) research activities focusing on applied research in collaboration with the world of work and (4) close ties with business and industry in contributing to regional development.

1.9. Final year dissertation (FYD)

As part of INES' curriculum, all finalist students are required to undertake a project, supervised by academic staff. The FYD is an important piece of work that requires the synthesis of the knowledge and skills acquired in earlier course work, i.e. the FYD will involve an in-depth study, investigation, and testing in any of the areas of specialized courses offered in a final year option group. The student is required to submit a formal report, to carry out a project demonstration and also to make an oral presentation upon the completion of research project. It is considered as the capstone of the undergraduate studies. This set of guidelines is prepared so that all INES students and staff are aware of the various FYD requirements in terms of research project schedules, dissertation document and presentation as well as criteria for assessment.

The FYD is designed to satisfy the program outcomes of INES curriculum, especially:

- An ability to apply knowledge and skills acquired in real life problem solving.
- An ability to conduct experiments, as well as to analyse and interpret data.
- An ability to design a system, component, or process to meet desired needs.
- An ability to function in a team environment.
- An ability to communicate effectively.
- An understanding of professional and ethical responsibility.

The FYD will instill in students the importance of teamwork, expose them to multidisciplinary considerations (e.g. economic, social, political, safety) and improve their communication skills (written and oral). The final project is the largest single piece of work that prospective employers will most likely be interested in during a job interview.

2. DISSERTATION DOCUMENT

The dissertation document should be of a professional quality. Students are expected to present their FYD document in a manner as would be required in the profession with correct spelling, grammar, and syntax.

2.1. APPEARANCE

2.1.1. Paper

High quality 80 g A4 paper shall be used. The paper should be white in color, acid free and non-erasable kind.

2.1.2. Type of machine and word processing software

Students are encouraged to use a personal computer to write their FYD document. Near-letter quality impact printers or laser-jet printers may be used; however, dot-matrix printers and ink-jet printers are not acceptable. Any word processing software such as Microsoft Word or WordPerfect would be suitable to write the final year project document. Students may also use Microsoft Excel, Lotus 123, ACCESS etc. for any tables, calculations or any other applications.

2.1.3. Font size and style

Only one font style may be used throughout the entire document, including the title-page, signature page, acknowledgement, bibliography and appendices. The basic text should be in “Times New Roman” of font 12 point. A 10, 11 or 12 point font size can be used for footnotes, captions, figures, tables and other print outside the basic text.

2.1.4. Line spacing

The line spacing should be set at 1.5. Single spacing may be used in the acknowledgments, tables of contents, references, appendices, list of tables/ figures, abstract, quotations set off from the text, captions of figures / tables, and footnotes, if necessary.

2.1.5. Headings

Chapter headings are to be centered and written in bold capital letters. They have to be on one line with the word chapter. The maximum size acceptable for chapter headings is 14 point. Other sub-headings are written in bold small letters, aligned to the left margin and should be of 12 point in size, and in bold.

2.1.6. Paragraphs

A single space has to be put between two successive paragraphs. A paragraph has to have 6 to 9 lines. A paragraph of 1 or 2 sentences has to be avoided. A heading that appears as a last line on a page will not be accepted. There should be a minimum of two lines of a paragraph at the bottom of the page under the heading.

2.1.7. Binding

The first and final submissions of the FYD document project for evaluation and examination must be in permanent hard-cover binding. Information printed on the cover must be between 18 and 24 point size. The color of the cover paper must be white, while the letters on that cover page must be black-colored (Appendix A).

2.2. FORMAT/LAYOUT

2.2.1. Margin

When typing the projects, the following margins should be observed (also please refer to the sample in the appendices): Left: 3.8 (This margin is wide for binding requirements); Top: 2.5 cm Right: 2.5 cm; Bottom: 3.0 cm. Except page numbers, all other projects material must fit within these margin requirements (including tables and figures).

2.2.2. Page numbering

Every sheet of paper in the document except the title page must be numbered. The title page is 'i' but not numbered. Preliminary pages (all pages before the body of the text) such as abstract, acknowledgments and table of contents are to be numbered in lower case Roman numeral (ii, iii, iv, etc). The main text pages are to be numbered in Arabic numerals (1, 2, 3, etc.) and all pages must be numbered. The page number must be centred to the text, not to the page and must be

placed at the bottom of the page. Since the bottom margin is 3.0 cm, the page number must appear at 1.3 cm from the bottom of the page. No dashed, periods, underlining or other marks should appear before, after or under the page number.

2.2.3. Justification

The FYD document must be fully justified (i.e. have even left and right hand margins). However, titles of sub-headings / figures/tables/chapters have to be centred if less than one line.

2.2.4. Figures and tables

Figures and tables have to be introduced first, before reaching them in the text. All illustrations (photographs, drawings, graphs, curves, etc.), not including tables, must be labelled as “Figure.” All figures must have a caption and/or legend and be numbered (e.g., Figure 2), unless there is only one figure. In this case, it should be labelled “Figure” with no numbering. Each figure should have a concise caption describing accurately what the figure depicts. Captions must be written in sentence case. All figures must be cited in text. Figures will be placed as close as possible to the first text citation. Figures must be numbered consecutively with Arabic numerals; each one must be referred to in the text as, e.g., Fig. 1 Figs. 1-3., in the brackets, except at the beginning of a sentence where the word Figure should be written out in full. They should be self-explanatory, i.e. understandable without reading the text. Data presented in the tables should not be repeated in the figures. The legend of the figures should be placed at their bottom.

Figure 1: Caption should be placed after the figure

All tables must have a caption and/or legend and be numbered, unless there is only one table, in which it should be labelled “Table” with no numbering. Number tables consecutively with Arabic numerals in order of mention in the text. Tables must be placed as close as possible to the first text citation. Each table must be referred to in the text as, e.g., Table 1, in the brackets, except in the beginning of a sentence when the word Table should be written out without brackets. The same data should not be given in both tables and figures. The title of a table should be placed in the top of it and should be brief but fully descriptive if the information contained.

Figures and tables (and their captions) should be center aligned. Justify alignment has to be used if caption is more than one line. In caption/legend, only the word Figure/Table and its number will be in bold (see caption for figure on page 6 and for table on page 7). Illustration, tables, or figures requiring more than one page should have the number of caption and the “continued” at the top of each additional page. For example Table 3 (continued).

The source of the data should not be indicated if the data are from the results of the research being carried out. If not, name(s) of author(s) and the year of publication have to be put in brackets after the table / figure caption (see reference section).

Table 1: The caption should be placed before the table

A	B	C	D
(1)	0.279	0.312	-
(2)	1.68	0.168	0.025

2.2.5. Symbols, units and equations

Symbols or nomenclature used shall be defined when first used in the text. Standard symbols or acronym normally accepted can be used. International system unit (SI) shall be used. Equation number should be Arabic numerals enclosed in parentheses on the right and margin if necessary. They should be cited in the text, for example, Eq. (1) or Eqs. (1)-(3). Equations start from the left. Punctuate equations with commas or periods when they are part of a sentence. For example,

$$\dot{x} = Ax + Bu, \quad (1)$$

$$y = Cx + Du. \quad (2)$$

2.2.6. Oversize material

The margins given in these guidelines are to be observed for all oversize, illustrative, and special material described in the following paragraphs:

- Reducing oversize to standard requirement margin: A copy that has been reduced on photocopying machines to fit within required margin for the 8 1/2 x 11 inch page must be legible. Usually, the earliest method is to reduce material to the appropriate size, trim the page, and mount it on a separate page to fit within the required margins. This “pasted up” version serves as the original, from which the copy is made for filing.
- Oversize material to be folded: some oversized material cannot be reduced to standard-page margin requirements, and must be submitted on a larger-than-standard page. Paper measuring 11 x 17 inches may be included in the document by converting the page to document size with pleat-like folds. With these The folds of the 17 inch wide paper must be at least 3.0 cm from the edges of the page to assure that the illustration is not cut when the edge of the page is trimmed in the binding process. When the oversized page is properly folded, the page number will appear in the position where it appears on the standard-size page. When submitted, the oversized page must be one continued sheet, with nothing glued or taped.

2.2.7. Photographs

Photographs may be attached in any of the following ways:

- Students may submit a page with an actual photograph, if the image size conforms to the margin requirements.
- If the photograph is smaller than A4 size, students may paste the photograph on a standard sheet of paper, according to the margin requirements, and photocopy it in black and white or

in color, as appropriate. Pasted-up pages, however, will not be accepted. High quality and high contrast photocopies must be made of any photographic material.

- c) Students may also use high resolution scanners to scan photographs and reprint them as required through suitable computer software. In this option, the size of the photographs, margins, color and contrast etc. may be adjusted according to the requirements.

3. RESEARCH PROPOSAL

The research proposal gives a background of the study, the problem statement, the objectives, questions and hypotheses of the research. Choice, significance, and study delimitation have to be given. It also includes the research methodology (materials and methods if lab work is there) that has to be written in detail. Its content should be general enough to guide the reader gracefully into the subject materials. It ends with the schedule and the budget. The research proposal is written in future tense. The research proposal content (except calendar and budget) becomes the general introduction in the final document and has to be written in the past tense. Since the research methodology (Materials and methods) is written in full (Chapter 3) in the final document, only one short paragraph summarizing the whole methodology is put in chapter 1 (general introduction). The research proposal has to include the following titles:

3.1. Background of the study

The background of the study gives specifics of the problem and not the history of the case. It gives citations and builds a case for the study. You may start with worldwide information, followed by Africa, Eastern Africa, and then Rwanda, if available. Related studies in memoirs carried out by INES students have also to be considered, if possible.

3.2. Problem statement

It should clearly show what the problem is? What the research seeks to solve. Give authoritative sources/citation what has been done and what is missing (gaps).

3.3. Research objectives

They include general and specific objectives. The general objective is a statement giving the main purpose/goal of the study. The specific objectives are specific statements giving the targets or intentions of the study and they have to be numbered as a), b), c), etc. They should be within the scope.

3.4. Research questions

The research questions are based on the specific objectives. The framing of questions should not attract a yes/no answers.

3.5. Research hypotheses

This is a tentative answer to the research specific objective which will be verified during the course of study. This answer might be accepted or refuted according to the study findings.

3.6. Choice of the study

This is the reason why the research was undertaken / the reason why a specific topic was chosen. Subheadings not acceptable.

3.7. Significance of the study

The significance of the study should explain who benefits from the study and how they will benefit from the study. Subheadings not acceptable.

3.8. Delimitation of the study

This shows the extent to which the results of the study can be generalized. This part shows the research delimitation in terms of time, space, domain, etc. Subheadings not acceptable.

3.9. Research methodology

This is a presentation of the techniques and approaches to be resorted to while carrying out the research. It has to be written in details with subheadings. Research methodology subtitle has to be replaced by “materials and methods” if the student has to do some lab work. Materials and methods should not be separated and must be written in paragraphs, and not in point form.

3.10. Concept framework model

The concept framework model can be added if necessary. It is the figure which summarizes the research. Dependant, independent, and intermediate variables have to be specified. The inclusion of the concept framework model will depend on the supervisor.

3.11. Organization of the study

The subdivision of the study should include structure of the study, chapter by chapter. It has to be written in short paragraph, without subheadings.

3.12. Schedule

This is a plan on how the research will be carried out from topic formulation up to final dissertation submission. It includes the timetable showing different activities to be done and the timeframe within which the activities will be accomplished.

3.13. Budget

This shows the budget in terms of money (cash) that will be used to accomplish the research.

3.14. References

The research proposal ends with a list of references consulted (see reference section).

4. ARRANGEMENT AND CONTENTS

4.1. Arrangement

The contents should be arranged in the following order:

- a) COVER
- b) TITLE PAGE
- c) DECLARATION OF ORIGINALITY (to be signed by the student) (Appendix C)
- d) APPROVAL (to be signed by the supervisor) (Appendix D)
- e) DEDICATION

- f) ACKNOWLEDGEMENTS
- g) ABSTRACT
- h) TABLE OF CONTENTS
- i) LIST OF FIGURES
- j) LIST OF TABLES
- k) LIST OF SYMBOLS, ABBRAVIATIONS, TRANSLATIONS, AND ACRONYMS
- l) LIST OF APPENDICES
- m) BODY OF THE TEXT
- n) REFERENCES
- o) APPENDICES

4.2. Cover

The information printed on the cover page should include the following information exactly in the given order and presented following INES house style presentation (Appendix A):

- INES RUHENGRI appears in full capital letters at the top of the page
- The logo of INES in the right margin
- Faculty ofshould follow
- Name of department should appear in the next line
- The title of the final year project document. It should be short and informative (understandable)
- A dissertation presented in partial fulfilment of the requirements for the award of a Bachelor's degree of.....in Note: Replace "presented" by "submitted" for the final submission of the memoire to the library.
- The name of the student used on the cover, must be the same under which the student is registered at INES. Registration Number of the student should appear following the name of the student. This is placed on the right side
- The name of the supervisor should be put after this, but left side.
- The place, month and year of submission should appear on the next line, right side.

The title of the FYD document will be in 18 point and the other texts will be in 14 point font size. The top and bottom margin for the cover page must be 6 cm. All information printed on the cover must be justified centred.

4.3. Title page

The information printed on the title page should be the same as the ones on the cover page (Appendix B).

4.4. Acknowledgements

Acknowledgements should be with 1.5 as interline space, under the heading ACKNOWLEDGEMENTS. This section may include appreciation of all those who assisted the author in the preparation of his/her final year dissertation, particularly the supervisor(s). The supervisor comes first, followed by other academicians in their academic ranks, and then relatives last. It should not exceed 300 words (Appendix F).

4.5. Abstract

The heading of ABSTRACT appears centred and in full capital letters beneath the top margin (Appendix G). The length of the abstract should not exceed 500 words and should be on only one page (Single spacing if necessary). The **one** paragraph abstract consists of:

- a brief description of the literature and the problem ending by objectives,
- a brief description of the methods or procedures used, and
- a condensed summary of the findings of the study with discussion as well as the major conclusions and recommendations.

4.6. Table of contents and lists of figures/tables/abbreviations/appendices

A table of contents (TOC) shows readers the starting page number of each major section and subsection in the document (Appendix H). The topics to be covered in the document must be carefully selected and organized. The flow of the topics to be presented is very important in order to guide a relatively novice reader in understanding the whole document. To an experienced reader, the TOC gives a quicker way of finding the interested information.

With the similar purpose as the TOC, the lists of figures/tables/abbreviations/appendices is to enable readers to find the figures, tables, abbreviations/symbols, and appendices explanation in the document (Appendices I, J, K and L).

4.7. Body of the text

The MAIN BODY TEXT should normally be divided into chapters such as (Appendix M):

- General introduction
- Literature review
- Research methodology (Materials and methods, if applicable)
- Results
- Discussion (Note: Results may be combined with discussion)
- Conclusion and recommendations

a) General introduction

The general introduction is necessary to give a background, problem statement, the objectives, questions, hypotheses, choice, significance, and delimitation of the study. One short paragraph summarizing the methodology is necessary here. The organization of the study is also important. The content of the general introduction is same as the content of research proposal, excluding the schedule (calendar) and budget. The research objectives, questions, and hypotheses have to be provided in the research proposal. However, depending on the supervisor, the research questions and hypotheses may not be necessary in the final document.

b) Literature review

This section is to discuss the theoretical aspects leading to the implementation of the project. Typically, this involves the historical background of the theories published in the research literature related to the topic and the questions or ambiguities arose in these theoretical works. Concepts definitions, theoretical framework / related theories, and related studies are thus

necessary for the present section. Citations for the sources of information should be given in the standard bibliographic format (see reference section) that point to the list of references. Only the literature review relevant to the topic has to be written as its most important role is to be used for discussion.

c) Research methodology

The section has to be written in the 3rd person and past tense (future tense for research proposal). The use of long sentences should be avoided. Subheading often makes this section easier to read and understand. Presentation of areas of the study, research design, source of data collection, techniques of data collection, study population, sampling technique and sample size, data processing and analysis, etc. have to be highlighted. Subtitles and their order for this section will depend on the supervisor. However, last subtitle of this section has to be statistical analysis of data. If lab work is there, research methodology has to be replaced by “Materials and methods”. They should not be separated and must be written in paragraphs, and not in point form.

The project may be in one of the following nature: Experimental research, design synthesis of hardware/software, development and application of theory. Depending on the nature of the project, the approach can be described in one or more sections. For experimental research, explanations shall be given with regard to the equipment used to conduct the experiment, the function of each apparatus, how the configuration works to perform a particular measurement, sources of errors and how to minimize them, materials and ways to produce the sample. For design synthesis of hardware/software, detailed descriptions on the techniques used shall be given. For development and application of theory to solve a particular problem, the techniques used shall be explained in detail. Mathematical derivations that are too lengthy shall be given in appendices. Experiments conducted to verify the theory shall also be documented.

d) Results

This section should, by means of text, tables and / or figures, give all the results obtained. The same data or information given in a table must not be repeated in a figure and vice versa. Repetition of information that is made obvious in figures/tables should be avoided in the text. Please take under consideration that result section should not consists of an interpretation of the results, which is reserved for discussion. Raw data which may take up a few pages, and most probably won't interest any reader, could be placed in the appendices.

e) Discussion

The interpretation of the data gathered can be discussed in this section. The discussion should be focused on the interpretation of the results avoiding a repetition of the results section. Interpret the findings in view of the hypotheses made, results obtained in this and in past studies on this topic. Sample calculations may be included to show the correlation between the theory and the measurement results. If there is any discrepancy between the theoretical and experimental results, an analysis or discussion should follow to explain the possible sources of error. Within the discussion, brief speculation on the implications of the reported findings may be included if appropriate. All references used in the discussion section have to be available in the first three chapters, and thus no new reference in the discussion section. The results and the discussion may also be combined into one chapter.

f) Conclusion and recommendations

A conclusion is not an abstract. It gives a brief overall finding of the study and its significance based on the formulated objectives. One short paragraph is sufficient. Additional discussion shall not be added. The potential applications of the results and recommendations for future work may be included.

4.8. References

The American Psychological Association (APA) referencing system is to be followed as specified in these guidelines. References should be cited in the text by the last name(s) of the author(s) and year of publication with a comma between them: For example (Knott, 1987) or (Cochran & Cox, 1957). If the citation is the subject of the sentence, only the date should be given in parentheses. For example, Knott (1987) reported that..., Cochran and Cox (1957) defined memoire as.... For citation of references with 3 or more authors, only the last name of first author followed by *et al.* (italicized) should be used: (Güneş *et al.*, 2002). If it is a part of a sentence, you wrote Güneş *et al.* (2002) suggested that... If there is more than one reference in the same year for the same author, please add the letters a, b, etc. to the year: (Jones *et al.*, 2004a, 2004b). If same idea was reported by various authors, references should be listed in the text first chronologically, and then alphabetically, and separated by semicolons: (Knott, 1987; Korey, 1987; Güneş *et al.*, 2002; Jones *et al.*, 2004a, 2004b).

Bibliography should be listed at the end of the document in alphabetical order without numbering. The second line of an entry must be hanging at 0.25 from the original margin. All authors should be included in reference lists. Please ensure that every reference cited in the text is also present in the reference list (and vice versa). The document should be checked carefully to ensure that the spelling of the authors' names and the years are exactly the same in the text as given in the reference list. The list of references is not classified or categorized according to the type of material e.g. books, journals, newspapers or magazines. They have to be mixed. References must be written in the manner explained in the following paragraphs.

5. REFERENCING

In writing references at the end of the document, the last name of the author is required to be written in full as printed in the title page of the reference material, or the page where information on copyright is printed. The other names are to be shortened to the initial alphabets only after the name, for example Ronald Brown => Brown, R.

John Fitzgerald Kennedy => Kennedy, J. F.

References should be formatted as follows (please note the punctuation and the capitalization):

5.1. Writing a complete reference of a journal / paper / article

Author, A. A., Author, B. B., & Author, C. C. (year). Article title. *Journal Title*, volume number (issue number), page numbers.

Examples:

Ogrydziak, D. M. (1993). Yeast extracellular proteases. *Critical Review of Biotechnology*, 13(2), 41-55.

Rindermann, H., & Ceci, S. J. (2009). Educational policy and country outcomes in international cognitive competence studies. *Perspectives on Psychological Science*, 4(6), 551-568.

Uzyol, K. S., Akbulut, B., Denizci, A. A., & Kazan, D. (2014). Land laws in African countries. *Scientific Journal of Land*, 46(1), 327-338.

If volume/issue or page numbers are not available, doi number has to be given. Example
Niyonzima, F. N., & More, S. S. (2014). Purification and characterization of detergent compatible alkaline protease from *Aspergillus terreus* gr. 3 *Biotech.* doi: 10.1007/s13205-014-0200-6.

5.2. Writing a complete reference of books

Author, A. A. (year). *Title of book* (Edition, not required for the first edition). Location: Publisher. Pages (where the information comes from). In case there is more than one place of publication, only the first one should be written.

Examples:

Grubb, M., & Neuhoff, K. (2006). *Emissions trading and competitiveness: Allocations, incentives and industrial competitiveness under the EU emissions trading scheme*. London: Earthscan. pp 230-231.

Jespersen, N. D., Brady, J. E., & Hyslop, A. (2012). *The molecular nature of matter* (6th ed.). Hoboken: Wiley. pp 201, 213, 250-252.

Howitt, D., & Cramer, D. (2008). *Introduction to research methods in psychology* (2nd ed.). Harlow: FT Prentice Hall. pp 145.

5.3. Article or chapter in an edited book

Author, A. A., & Author, B. B. (year). Title of chapter or entry. In A. Editor, B. Editor, & C. Editor (Eds.), *Title of book*. Location: Publisher. Pages.

Example:

Treasure, D. C., Lemyre, P. N., Kuczka, K. K., & Standage, M. (2007). *Motivation in elite sport: A self-determination perspective*. In Hagger, M. S., & Chatzisarantis, N. L. (Eds.). *Intrinsic motivation and self-determination in exercise and sport*. Champaign: Human Kinetics. pp 153-166.

5.4. Unpublished works

a) Doctoral theses, Master's dissertations and memoire (Unpublished). Name of University, city and / or country.

Swinton, M. A. (1984). *Family stress in phenylketonuria* (Unpublished doctoral thesis). University of Auckland, New Zealand.

Usaneza, M. P., & John, P. (2017). *Citric acid extraction from Bacillus terreus* (Unpublished memoire). INES Ruhengeri, Musanze, Rwanda.

b) Unpublished manuscripts

Author, A. A. (1999). *Title of manuscript* (Unpublished manuscript or Manuscript submitted for publication, or Manuscript in preparation). Name of University, city and / or country.

Example:

Geisel, T. S. (2000). *All sorts of sports* (Unpublished manuscript). INES Ruhengeri, Musanze, Rwanda.

5.5. Online resources

Example:

Hendry, L. (2011). *Visual pattern perception - shapes, spatial frequency and gestalt laws* [PowerPoint slides]. Retrieved from

<http://usqstudydesk.usq.edu.au/mod/resource/view.php?id=457749>

5.6. Reprints

Buckley, C. B. (1965). *An anecdotal history of old times in Singapore*. Reprint. Musanze: INES Ruhengeri Press.

Note: Further information on referencing can be obtained from

["http://www.usq.edu.au/library/referencing/apa-referencing-guide"](http://www.usq.edu.au/library/referencing/apa-referencing-guide)

6. SUBMISSION OF MEMOIRE

Prior to memoire defence, one hard copy have to be submitted to the department for evaluation by assessor. The student would additionally need to submit another copy to the department for chair, give one copy to the supervisor and retain one. The student should ensure that the dissertation is free of grammatical and typographical errors, and the printing is of standard quality. After evaluations and approval of the final document, the student submits the soft and hard copies of his/her corrected dissertation to the Department and to the Library. The soft copy is also submitted to the Deputy Vice Chancellor Academics and Research's (DVCAR) office. The soft copies are submitted through the emails of the departments, library and DVCAR office.

7. ASSESSMENT PROCEDURES AND GUIDELINES

7.1. Plagiarism

Plagiarism check processes must be followed by all students submitting their project/dissertations. As requested by the Ministry of Education, dissertation supervisors will give advice, comments and suggestions by email through review (comments and track changes). One time printing will only be done after plagiarism check at the time of dissertation submission.

To check the plagiarism, the software will be used and available to the Head of Department. The software gives the details and procedures about the plagiarism check and follow the instructions provided. The report output will be in percentage of plagiarism. To be accepted for submission, it must be free of plagiarism. The entire document report can be viewed in the document viewer, which provides all the details of matches from the text which has been put for the plagiarism check. Head of Department shares the plagiarism report produced in the document viewer and submit it to the Dean along with other documents for approval.

7.2. Assessment procedures

Several different approaches for dissertation assessment are possible. In summary, the dissertation assessment process comprises of four different forms or methods of evaluation, these are research proposal, written dissertation, performance of the student during the research progress (the criteria for assessing the performance of the student may include categories like enthusiasm and self-motivation, time management, communication, record keeping and so on) and an oral presentation. Usually, written dissertation assessment and oral presentation constitute the main pattern of the assessment process.

7.3. Assessment criteria

Assessment during supervision

During supervision, the research project progress will be assessed by the supervisor(s). Supervisor(s) must be able to ascertain that the written document of the student is worthy of examination both in terms of its content and its technical presentation before the document is submitted for assessment and grading. The document must be completed and submitted prior to the oral presentation. The evaluation of the candidate during the research progress should be based on the following criteria: enthusiasm and self-motivation, time management, record keeping, developing new ideas, reporting and writing skills.

Written memoire

The assessment criteria for a written dissertation embrace four areas of the work which are differently weighted as follows (Appendix P):

- | | |
|--|------------------------|
| • General introduction and literature review | 10% of the total marks |
| • Methodology | 10% of the total marks |
| • Results, discussion and conclusions | 20% of the total marks |
| • Grammar and communication of ideas (flow of ideas) | 5% of the total marks |
| • Overall presentation of the document | 5% of the total marks |

Oral presentation

The oral presentation should be conducted using multimedia tools (e.g. PowerPoint). 10-15 min are allocated for each oral presentation followed by 10-15 min of comments, questions and answers. The oral presentation session will be open to the public.

The oral presentation is graded as follows:

• Physical presentation	5%
• Elocution	5%
• Time management	5%
• Capacity of answering the questions	25%
• Innovation	10%

After oral presentation, student has to improve the document as suggested by the panel and get signatures from assessor, president and supervisor before final submission.

8. APPENDICES

In the document, this section contains some materials which are not suitable to be put inside the main text, for example raw data, computer programs. They have to be appendices and numbered as A, B, C, etc.

Note:

Minimum pages for undergraduate memoire is 30 excluding introductive and appendix pages (i.e at least 30 pages from general introduction to references).

Written report

The assessment criteria for a written dissertation embrace some areas of the work which are differently weighted as follows:

Criteria to consider	Marks obtained	Maxima
1. General Introduction and literature review		10
2. Methodology		10
3. Results, discussion and conclusions		20
4. Grammar and communication of ideas (flow of ideas)		5
5. Overall presentation of the document		5
TOTAL		50

Oral presentation

The oral presentation should be conducted using multimedia tools (eg. PowerPoint); 10-15 minutes are allocated for each oral presentation followed by 10-15 minutes of comments, questions and answers. The oral presentation session will be open to the public. The oral presentation is graded as follows:

Criteria to consider	Marks obtained	Maxima
1. Physical presentation		5
2. Elocution		5
3. Background material used		5
4. Time management		5
5. Capacity of answering the questions		25
6. Relevance of the initial presentation made		5
Total		50
Overall Total		/100
